

IN THE CLAIMS:

Please amend claims 1 and 20, cancel claim 10, and add new claims 40 and 41 as

follows:

Sub E4
1. (Amended twice) A choke coil comprising:
a closing magnetic core including a first magnetic core comprising a center magnetic leg, an outer magnetic leg, and a first common magnetic yoke, and a second magnetic core comprising a second common magnetic yoke in contact with said first magnetic core;
a coreless coil including a plate-type wire comprising at least one of a flat type wire and a foil type wire, wherein said coreless coil is disposed around the center magnetic leg and separated therefrom by an insulating layer; and
inside and outside terminals respectively coupled to inside and outside ends of the plate-type wire of the coreless coil,
wherein said inside terminal is led outside said closing magnetic core through at least one of:
a notch in the first common magnetic yoke;
an opening in the first common magnetic yoke;
a notch in the second common magnetic yoke; and
an opening in the second common magnetic yoke.

Sub E4
20. (Amended twice) The choke coil as defined in Claim 19, wherein a thickness of a wall of said cylinder of the terminal base varies from a minimum thickness to a maximum thickness, and wherein a guiding portion is provided at the point of maximum thickness of the wall of said cylinder and the guiding portion engages with the inner terminal of the coreless coil.

Sub E4
40. (New) The choke coil as defined in claim 1,
wherein the inside terminal is led outside the closing magnetic core through at least one of the notch and the opening provided in the first common magnetic yoke; and
wherein a thickness of the second common magnetic yoke is 65-90% that of a thickness of the first common magnetic yoke.
